## Summary

Senior Software Engineer specializing in distributed systems and backend architecture for critical energy infrastructure. Combines hands-on delivery with cross-team technical leadership, modernizing legacy systems and turning customer-specific integrations into reusable product capabilities.

## Experience

**Senior Software Engineer (Full-time)** May 2024 – Present
*VIVAVIS AG* *Remote, Germany*

- Drove the transition from bespoke B2B integrations to reusable product capabilities across an enterprise software portfolio, adopted by approximately 10 major customers and established as the standard for new integrations.
- Owned the architecture and core implementation of a highly available energy data platform, modernizing legacy components with horizontally scalable services designed for sustained 1M+ events/min and recovery from component failures.
- Launched a funded AI engineering initiative; now technically lead a cross-team group of engineers developing MCP integrations and automation for code review, onboarding, and integration testing, used by dozens of employees across Engineering, QA, and Product.
- Initiated architectural improvements by identifying systemic bottlenecks, validating solutions through proofs of concept, and guiding engineering teams through implementation and operational handover.
- Drove the shift from rigid, centrally managed abstractions to team-owned data models and service contracts, designing and implementing the initial solutions while preserving stable external interfaces.

**Software Engineer (Part-time)** Jul 2021 – May 2024
*VIVAVIS AG* *Remote, Germany*

- Advocated for Spring Boot adoption over proprietary Java frameworks, reengineered legacy backend services, and analyzed existing architectures to support modernization.
- Designed and deployed Kubernetes-based infrastructure and highly available applications to meet strict availability SLAs.
- Translated regulatory and business requirements into technical specifications, collaborating with stakeholders on interface design and implementation.

**Working Student Software Engineer (Part-time)** Mar 2018 – Jul 2021
*IDS GmbH* *Ettlingen, Germany*

- Designed, developed, and maintained full-stack enterprise applications, including backend services, database integrations, and user interfaces.
- Designed and maintained PostgreSQL and Oracle database schemas, queries, and integrations, while automating operational workflows.

## Education

**Karlsruhe Institute of Technology** Karlsruhe, Germany
*M.Sc. Computer Science* *Apr 2022 – May 2024*
*B.Sc. Computer Science* *Oct 2017 – Mar 2022*

## Technical Skills

**Languages:** Java, Python, SQL
**Backend:** Spring Boot, FastAPI
**Distributed Systems:** NATS JetStream, Apache Kafka, Event-Driven Architecture
**Data & Storage:** PostgreSQL, Redis, CloudNativePG
**Infrastructure:** Kubernetes, Helm, Docker

## Languages

English (C1), German (C1), Ukrainian (Native), Russian (Native)
